

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

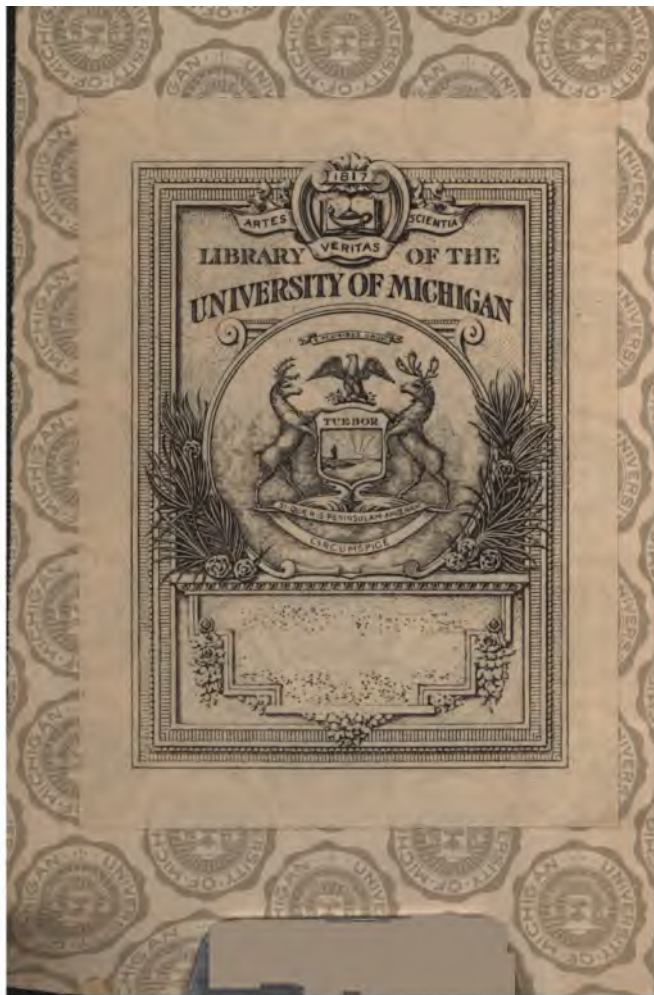

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

GENERAL INDEX

An Index of the World

CONTAINING

40,000 NAMES.

It is believed that the General Index which here follows is the most complete of its kind ever published. None other in a work of this nature has contained as many names, nor anything like as large a proportion of population and area statistics.

The care that has been taken in the procurement of the latest or most correct population statistics for use in this Index has been alluded to in the Preface; it is here but necessary to again point out that, with a very few exceptions, outside of the United States, Mexico, the European countries and their possessions precise counts of population are not to be had. Elsewhere estimates and comparative figures must be depended on; the latest, or most authoritative of these, have been gathered and weighed for this work.

A word as to the use of the Index is in place. The use of the map keys is obvious. On the margin of each map letters and numerals will be found. The juncture of a line leading between two like letters on opposite sides with a line between two like numerals on the other sides of the map marks the central point of a "Key Space." Thus on the map of Siam (No. 95) a line drawn between F F, and crossing one between 4 4, intersects with it at the town of Pawang, which is in the center of the key square indicated by the symbol F 4. The lines of latitude and longitude render the identification of the key squares easier in some maps than others; but a little care enables one to find any Index reference almost instantly.

The intelligent use of this Index, of the table of contents, and in reading the maps will show the gazetteer value of this work. Take the case of Trenton, N. J., as an example. The Index discloses that it is to be found on Map No. 17, at Key D 3, and also that it has 73,307 inhabitants. The map tells us that it is on the Delaware river, on the Pennsylvania Railroad between New York and Philadelphia, and the terminus of a branch line of the Philadelphia and Reading (New Jersey Central) Railroad, between the same cities. We also find that it is the Capital of the State, which the Table of Contents informs us contains 7,815 square miles of area, while reference to the Index places the state's population at 1,883,669. Here, then, are made plain Trenton's geographical situation, local environment, administrative nature, size, mediums of access, and area and population of the state of which it is the political center, seven items of a gazetteer nature.

It is the belief of the authors of this work that nowhere else can there be procured for ten times its price a single volume that gives as much accurate statistical information as herein contained.

A GENERAL INDEX.
